

Amendments to the Specification:

Per request from the Examiner Applicant's hereby submit a substitute specification including amendments previously made in the Preliminary Amendment filed on May 27, 2005 and additional amendments made at this time. The specification has been edited to correct several informalities including problems arising from the translation of the original French specification to English. The proposed amendments to the specification may either be found directly in the priority document or readily inferred there from. Accordingly, no new subject matter has been added.
